Task 1

Discuss the topic with the other examinee:

Is working in a medical field a vocation or just a job?

Task 2

Your patient is a 55-year-old man with diabetes. Talk to your patient, addressing the following points and responding to any questions the patient may have:

- Ask about at least 3 characteristic symptoms. Inform the patient how these symptoms can be prevented or managed.
- Take the patient's history (e.g. medical history, social history, or family history) and identify important risk factors.
- Explain the disease to the patient.
- Recommend appropriate examinations and describe what each examination involves and why it is important.
- Discuss suitable treatment options.

Task 3

Talk about the following medical topic:

Describe the structure and function of the nervous system.
